THE UK'S PREMIER SURFACE AGENT

# Combi-Gel

**Combi-Gel** is a specialised, high quality grade, oil and wax based product that has been designed to be blended with Silica Sand to create a high performance synthetic riding surface.

The fine balance of oil and wax allows for a consistent and reliable coating that provides riding stability, suppresses dust and removes the need for surface irrigation.

With lower working temperatures **Combi-Gel** is designed to be applied on site, as a spray. This unique process allows **Combi-Gel** to be used in a wider variety of applications, allows it to be used as a rejuvenator and of course, reduces the cost of having a professional waxed surface.

All synthetic surfaces work at their optimum when combined with additional fibres, our Gel and Fibres complement each other to produce a surface that delivers outstanding results.

The high grade silica sand, fibres and rubber crumb are delicately coated and bound together to increase the viscosity of the finished surface, increasing its shear rate characteristics - said plain and simply, the surface is stronger and less likely to move.

The cushioning qualities provided by the Gel offers protection against the dangers of deep riding and offer increased response and feedback from the surface.

**Combi-Gel is the complete surface, low maintenance and offering sure footing and a higher performance for both indoor and outdoor applications.**

- **Reduces dust**
- **No irrigation required**
- **Increased stability**
- **Cost effective rejuvenator**
- **High performance**
- **Increased response**
- **Sure footing - confident working horses**
- **On site installation**
- **Full UK Installation available**
